

Temporal Light design documents universal race headphones

Electrical bus diagram (Drawings not to scale)

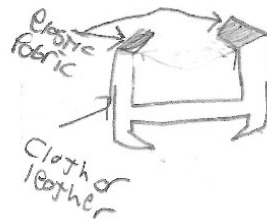

snap in

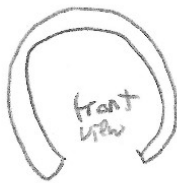

(mounting holes) line up with
(aux connection, ant) frame and is flush

ear cuff cross section ^{top view} view A

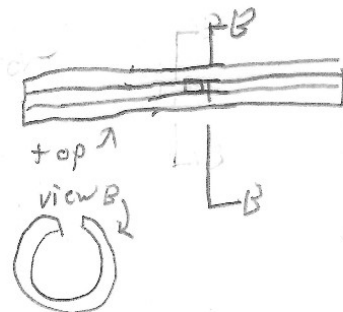

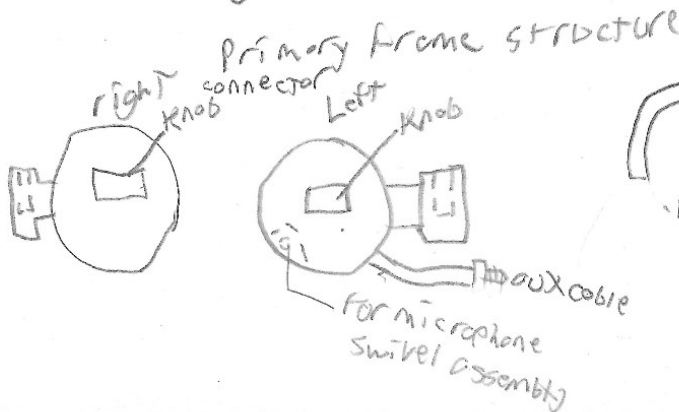

the elastic band wraps around the ear near the base of the head for humans or for animals it wraps partially around the ear

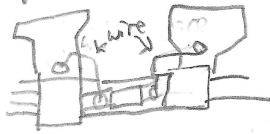

Primary frame structural (optional)
Support

flattened view

ear piece frame connector to hinge loop frame top view for convenience

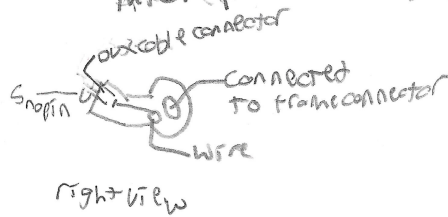

Wire will be added later

place ear cuff in ear piece assembly with the non elastic band put into the assembly (if not already done)

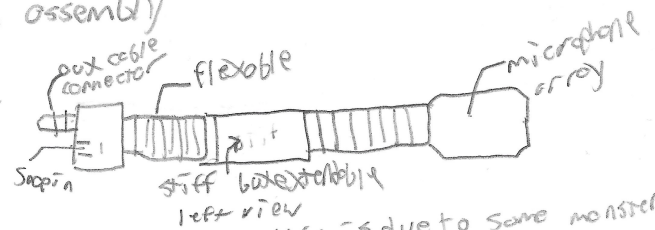

then snap in the ear piece frames with the ear piece assembly

Microphone swivel assembly

this side's apart of the connector assembly

the reason for this is due to some monsters have snouts to work around

these snap together

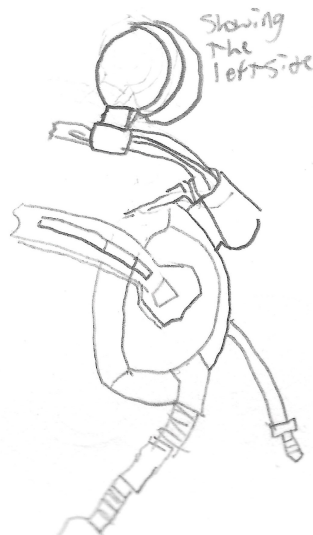

Final assembly steps

route the speaker wires from the frame connector into the hinge loop and solder it to the earpiece connectors put rubber insulation over the new connection

firmly attach the hinge loop into the connectors

then snap in the optional structure brace with the snap knobs on the connectors

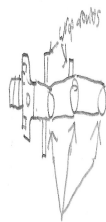

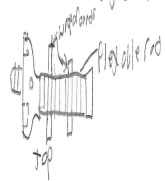

breakaway

early design prototypes had both the earpiece frame connector and normal earpieces this was scrapped and the aux cable connectors were added for more racial compatibility

for humans using this flip the earpiece around and move it as far down the hinge loop as possible

car piece long car model

speakers with
fabric covering

frequently asked questions
Why? This is to show immersion with
the world to show how technology
exists despite all the numerous
different head types from different
recesses.

Why not use earbuds? I use both but I wanted
to have headphones that at least looked
similar to headphones

Why so many options? Similar answer to the first
question to show how technology was evolved
and to give us a similar experience to be
in the world

Can't you characters use magic? So why make this?
Some monsters can't use magic (or use it a lot)
Old humans can't naturally use it at all so this
makes it an even playing field
